Wearable Device & Cognitive Testing In-Lab and At-Home

If you meet these criteria, you may be able to participate:

- Aged 30-85 years old
- Both Healthy and those with Parkinson's Disease wanted!
- Native English speaker or demonstrated English fluency

Receive \$575 for
participating!

The Study:

We seek to determine the ability of digital assessments to detect functional impairments in Parkinson's, relative to age-matched healthy controls, between in-laboratory and at-home performance of tasks.

The study will comprise of three in-lab sessions (approx. 2.5-3.5 hours) involving digital neuropsychological assessments and one week of wearing devices.

We are located near Boston Medical Center at 650 Albany Street, Evans Biomedical Research Center, Room X-140
